

CSS Basics

CSS, or Cascading Style Sheets, is a style sheet language used to describe the presentation of a document written in HTML. CSS controls layout, colors, fonts, and overall visual appearance. Basic CSS selectors target specific HTML elements, allowing developers to style them. Key properties include color, font-size, and margin. In this chapter, we introduce CSS fundamentals, covering how to apply styles, use selectors, and manage layout. Mastering CSS is essential to creating visually appealing websites.
