HTML Fundamentals

HTML, or HyperText Markup Language, is the foundational language for building websites. It provides the basic structure of a webpage, which is later enhanced by CSS and JavaScript. HTML elements are the building blocks of all websites, including tags like <p> for paragraphs, <a> for links, and <img> for images. Learning HTML is the first step to creating web pages. This chapter introduces essential tags, attributes, and how to create a simple webpage. Understanding HTML's role is key to creating the basic skeleton of a website.
